Troubleshooting Common Family Tree Maker 2024 Issues

Even if a number of users opt for Family Tree Maker 2024 as one of the reliable genealogy programs, there are still some issues you might occasionally encounter. Problems like missing information, slow performance, or accidental edits can easily occur, especially when you are working on a large database. Although these issues still exist, you can resolve them easily with the right approach. Look at the below-mentioned problems with their solutions.

How To Fix Slow Or Freezing Performance

If Family Tree Maker is responding slowly or freezes suddenly, it can happen due to “Large Tree Files”, “outdated software”, or “temporary system issues”. If you perform basic maintenance or keep the software updated, you can easily improve the performance. For a complete troubleshooting guide, visit the **Slow and Freezes Family Tree Maker**.

How To Fix Missing Family Information

A number of times, family details might appear incomplete after importing, syncing, or editing a tree. It happens due to data synchronization or display issues rather than permanent data loss. If you have noticed a missing name, our **Missing Surname in FTM 2024** guide will help you identify and resolve the issue.

How To Undo Recent Changes

It's common to make mistakes while editing a family tree. Whether you have changed the wrong records or deleted information by mistake, Family Tree Maker will provide ways to recover your work. Take a look at the recovery methods for **Undoing Recent Changes in FTM 2024**.

How To Manage Media, Source Images And Reports

Photos, historical records, and reports play an important role when it comes to documenting your family's history. If you keep these files in an organized manner, it will make your tree complete and easy to navigate. If you want to save copies of linked historical records for offline use, our **Downloading Source Image in the FTM 2010-2024** guide can be your helping hand.
